SETTING A NEW COMBINATION

This resettable combination padlock is set to open at 0-0-0 (Even though dials may be positioned on other numbers.)

Step 1

Turn the dials and align the numbers 0-0-0 so they are clearly visible inside the "Windows".

Step 2

Pull up the shackle and turn it 90° counterclockwise to align the projection on the shackle with the notch on the lock body.

Step 3

Press the shackle down firmly and turn the shackle further 90° counterclockwise so it is fixed in this position.

Step 4

Turn the dials to set a new combination.

Step 5

Return the shackle back to the original position. Your new combination is now set.

Step 6

TEST THE LOCK BEFORE USE.

OVERRIDE INDICATOR

1. The red inspection status feature (red collar) will appear from the bottom of the shackle, if the TSA baggage screener has inspected your bag or if your lock has been tampered with.
2. To reset the red indicator, you must perform the following 3 steps to turn the indicator back to the original position.

Step 1 Turn the dials to the opening combination.

Step 2 Pull up the shackle.

Step 3 To reset the red indicator, you can either turn the shackle 360° counterclockwise until you hear a "Click" or simply insert a small pin-like device, into the small hole that is located on the side of the housing, on the opposite end of the dials.

Keep your combination in a safe and accessible place for future reference.

NOTE:

The Transportation Security Administration (TSA) screeners and airline check-in staff at airports are trained to recognize the Travel Sentry® logo. They understand that baggage with locks displaying this mark are permitted to remain locked.

TSA screeners have access to special codes that allow them to open those locks in the event that the baggage must be opened for inspection. With Travel Sentry® Approved locks the TSA can screen checked baggage faster, without having to break open locks.
